Shop CAM94 Self-supporting Flat Head Drill Screws from STIPL Roofz—secure fastening for roof tiles and battens without pre-drilling.

Flat Head Self-Drilling Screws – CAM94

CAM94 self-supporting flat head drill screws provide secure fastening for roof tiles and battens without pre-drilling.

The **Self-supporting Flat Head Drill Screws – CAM94** are designed for fastening roof tiles and battens to metal or wood without pre-drilling. Crafted by STIPL Roofz, these galvanized steel screws feature a flat head for a flush finish and corrosion resistance. Measuring 50 mm in length and 5.5 mm in diameter, they ensure strong holding power for flat and mixed roof systems, ideal for modern and traditional roofing projects.
